SUCCESSFUL PROSTHETIC
RESTORATION

TRI® is performing an official post market clinical follow-up (PMCF) study in alignment with its notified body. The study aims to conduct an analysis of critical implant performance criteria of TRI® implants by multiple centres around the globe over several years. The TRI® PMCF study (initiated 2014) is an ongoing study and expanded every year. Results are published at the end of every year. 5 year results with > 120 implants will follow end 2018.

✓ **Results after 4 years: outstanding success rate with 92 documented implants.**
