DUCTION
LINE

#1 DIGITAL IMPLANT
COMPANY

The World's First Dental Implant without an Abutment

matrix[®]

NO
ABUTMENT.
NO
CEMENT.
NO
LIMITS.

The **matrix**[®] is the world's first dental implant approved for fully digitally single and multi-unit restorations directly on the implant without the use of the abutment. This unique implant connection has been specifically designed for the new digital manufacturing technologies such as CAD/CAM milling or 3D printing.

Unleash the benefits that will **change your workflow**

Explore the benefits

Esthetics

- + 100% patient-individual emergence profile 
- + Concave & pink anodized implant shoulder for soft tissue design 
- + Natural colour with zirconia directly on the implant 

Immediacy

- + Immediate full digital local workflow (chairside or labside) 
- + TRI+ connection to all open digital workflows for chairside & labside milling 

- + Faster Workflow and increased precision by 73% due to no abutment, no cement, no model and no analog 
- + No limits in materials, indications and angulations (up to 100° between implants) 
- + Significant material and cost savings 

Simplicity

- + Strong like an abutment 
- + Higher precision 
- + No cement: 100% screw retained restoration, eliminating the risk of periimplantitis 

Performance

Our vision of the future digital workflow.

In the past years prosthetic manufacturing has completely changed and new materials were developed. However, the implant interfaces has remained unchanged for the last 30-40 years, leading to a mismatch between implant connections and modern prosthetic manufacturing.

TRI® vision was to connect these two worlds by thinking the other way around. In regards to the precision of today's milling technologies and from a CAD/CAM productions' point of view we have created the **matrix®** implant system, where no abutment and cementation is needed.

A technology ahead of its time, prepared to bring digital implantology to a new dimension.

Three key challenges in digital implantology nowadays.

Our solution. The ability to mill the restoration directly on top of the implant.

The challenge #1

The achievement of same or higher industrial precision of abutments manufacturing in standard chairside & labside milling machines

Our solution #1

Dedicated milling strategies combined with a connection design that can be milled in an easy and forgivable way.

The challenge #2

A implant connection suitable for modern materials such as zirconium-dioxide.

Our solution #2

To design the worlds first connection that respects latest science and biomechanical properties of zirconia.

The challenge #3

The achievement of same or higher mechanical stability compared to TRI® Performance Line.

Our solution #3

Getting stronger wall thickness in restoration by removing Ti-Bases.

restorations
P. 13

A World-class connection designed to support **zirconia** on **titanium**

matrix[®] PowerBase and its 20° degree internal flat connection, maximizes the surface area to support prosthetic restoration directly on the implant. The world-class connection provides self-centering properties for ideal handling and fit and allows high divergences (50°) between implants.

- + Platforms P37 and P45 with significantly larger area than a Ti-Base
- + Optimal for force transmission between implant and crown
- + Support direct restoration with all materials

Platforms available

Multi-Level P37 (ø3.7mm) Multi-Level P45 (ø4.5mm) Bone-Level P37 (ø3.7mm) Bone-Level P45 (ø4.5mm)

Engaging

matrix[®]
SmartLock

A versatile connection for Engaging and Non-Engaging restorations

matrix[®] SmartLock is a self-locking system for automatic positioning, which allows only one single position for crowns and a non-engaging position for multi-unit restorations. It consists of two big vertical rotation blockers with 1.2mm distance for easy milling of the prosthetics and tactile feedback.

Non-Engaging

- + Highly precise fit through vertical guidance
- + Self-locking system for automatic positioning (one position)
- + Allows for engaging as well as non-engaging connections based on milling strategy.

Connection designed for easy and highly precise local milling.

matrix[®] MillingFit achieves easy and precise milling with standard tools through dedicated milling strategies. A compact connection between implant, screw and crown with no hollow spaces and an interface surface roughness which rises above industrial abutment manufacturing.

- + Standard drills and dedicated CAM strategies for matrix[®]
- + Achieves 0.2 μ of surface roughness for all materials
- + Better than industrial abutment manufacturing (Ra 0.6 μ)

Dedicated milling strategy for matrix[®] connection.

Profiles for increased biological width.

Concave Multi-Level emergence profile for infinitely more esthetics

The **matrix**[®] multi-level implant comes with a modern emergence profile and a unique concave design. The implant line features a pink anodized neck for optimized translucency and supports modern surgical procedures, such as sub-crestal placements. Ideal for minimal invasive procedures and an increased biological width, **matrix**[®] is better than ever in guaranteeing high esthetic results and longevity.

Bone-Level platform switching

The **matrix**[®] bone-level implant features a 20° shoulder for high divergence bridge restorations and integrates platform-switching to preserve the crestal bone.

Multi-Level

Pink anodization for tissue management

Concave design for increased biological width

Thanks to reverse-taper design bone doesn't get re-exposed

Bone-Level

The 20-degree shoulder for high divergence bridge restorations

Platform switching for stable crestal bone levels.

0,5mm machined neck in the crestal area.

matrix[®]
SmartBolt

Intelligent screw system for all materials and indications.

matrix[®] SmartBolt consists of three different screw heads, designed for material-specific milling strategies to ensure a precise fit. The specially treated screw surface guarantees increased hardness, scratch-resistance and fatigue strength. The sterile screws are gold anodized for higher esthetics with translucency zirconia.

- + Three different screw heads for dedicated indications and materials
- + Special Titanium (grade 23) for maximal strength
- + Screw-head is designed to allow for ideal material-specific milling strategies.

Metals

Narrow screw-head for metal restorations to minimize diameter of screw-access hole

Ceramics

Medium-size screw-head optimized to support zirconium.

Polymers

Round screw-head to support provisional polymers with ideal force distribution.

Highest design flexibility in local production

matrix[®] ProFlex allows implant divergence up to 50° and 20° angled screw channels. The compact design facilitates the placement of fully anatomical crowns without adjustment and supports easy impression taking for angulated implants.

- + Screw channel up to 20° degree angulation all around
- + Occlusal esthetics in anterior region
- + Better handling in posterior region

Same emergence profile for healing, provisional and final restoration.

matrix[®]
ProFlex

Patient-specific & individual emergence profile

matrix[®] allows to create 100% digital, chairside manufactured patient-specific emergence profiles by considering the biological shape and transferring the design 1:1 throughout the whole treatment process (healing, provisional and final restoration). With **matrix**[®] any design and shape on any material is possible and guarantees a full-anatomic and high esthetic gingiva management.

- + Production of personalized healing collar from any material
- + Immediate and efficient through chairside manufacturing option
- + High esthetic gingiva management

Dr. Ramón Gómez Meda (Spain)

TRI® BoneAdapt for immediate stability

Platform Switch Neck Design
to shift the biological width horizontally
and stabilize the crestal bone

- + **Crestal thread design**
with square thread pattern to protect the cortical bone
- + **Body thread design** (60 degrees)
to enhance bone surface area in the spongiosa for optimal bone-to-implant contact
- + **Apical thread design** (45 degrees)
with increased sharpness for immediate primary stability
- + **Round Apex**
to protect the Schneiderian Membrane

Triple-lead threads

Three independent threads start 120° apart and spiral around the implant body and end on the crestal vertical groove. Triple threads provide a lead of 1.8 mm per rotation as an average.

TRI® SBA Surface for predictable osseointegration

The TRI® SBA (sandblasted, large grit, acid-etched) surface is one of the industry gold standards for more than 20 years. It is created by blasting the implant surface under pressure with corundum particles. In the final step the surface is acid-etched twice in order to attain a medium roughness.

Machined implant neck

The bone level implants feature a 0,5 mm machined neck in the crestal area.

Bone-Level

Gingiva coloured implant collar

The multi level implant features a 1,8mm machined implant collar for optimal esthetic results in the posterior area.

Multi-Level

Surface structure

A macrostructure of 20-40 µm and a micro structure of 2-4 µm as an ideal basis for excellent osseointegration. This structure has been proven by numerous clinical studies for this surface type.

Connection to all open digital workflows with labside and chairside milling

TRI+ Digital Solutions guarantees a universal implant open interface to leading technology partners in digital dentistry. In contrast to numerous digital locked systems, TRI+ helps to create more transparency and eliminate all barriers to their respective treatments. TRI+ Digital Solutions offers a wide range of indications via 3D planning, guided surgery, CAD abutments, CAD / CAM screw-retained and cement-retained restorations or modern treatments

- + 3D-Planning & Guided Surgery
- + CAD/CAM screw-retained crowns and bridges
- + CAD/CAM screw-retained bars and bridges

download the **matrix®** Case Book

Dr. Aleksandru Ionescu

Immediate **matrix®** Multi-Level Implant insertion

3D-printed customized healing collar with copied emergence profile of extracted tooth

Final monolithic crown with transferred emergence profile, no need of additional impression taking

Perfect fit of final restoration

Dr. Joel Teles

Initial Situation
Insertion of 2 **matrix®** Multi-Level implants with tissue grafting on 21

Insertion of esthetic CAD/CAM PMMA Provisional without abutment

Perfect established tissue after removing PMMA provisionals after 10 weeks

1-Yeay Follow-up
X-Ray comparison insertion day vs. final

Dr. Ramón Gómez Meda

Initial situation. Insertion of one **matrix®** Multi-Level implant, grafting and suturing

Soft Tissue healed after 6 weeks

Insertion of two monolithic zirconia final crowns screw-retained on one **matrix®** implant

1-Year Follow up

Dr. Ivan Peev

Initial situation

Immediate placement in upper and lower jaw with **matrix®** Bone-Level implants

IOS for direct CAD/CAM chairside PMMA temporary restoration

1-Year Follow-up of final full zirconia restoration without abutment
