Saturday	17th	BATHURST	(9AM - 12PM)

JULY

Saturday	1st	PORT MACQUARIE	(7PM -9PM)

Dr Tom Giblin
Co-Chairman of the
TRI Clinical Advisory Board

Prof Axel Spahr
Co-Chairman of the
TRI Clinical Advisory Board

THE WORLD'S FIRST DIGITAL IMPLANT WITHOUT ABUTMENT

matrix®

- Scan&Smile
- DHC Library
- ScanBridge
- Guided Surgery
- Tooth-in-a-Box
- Lab Design
- Lab Milling
- LMS

The **matrix®** is the first-ever dental implant connection that has been specifically designed for the new digital manufacturing technologies such as CAD/CAM milling or 3D printing. The implant concept allows to plan the restoration directly on the implant without the use of the abutment and without manual cementation.

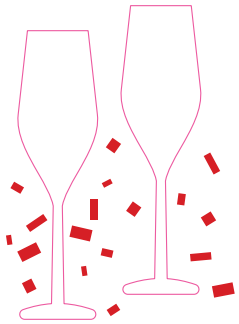
8 digital matrix® applications allow an immediate access to fast, precise and profitable clinical workflows - eliminating the need for an abutment.

TRI DENTAL IMPLANTS

It is with great pleasure that we invite dental surgeons and lab technicains to join TRI Dental Implants Australia's next event series, where we will highlight the most recent advancements in dental implant technology. You will have the chance to learn about the first digital implant ever created, its revolutionary impact on dental implantology, and how it can be restored with Zirconia without the use of an abutment. Even in ASC and multi-unit solutions, the TRI-matrix implant system only ever requires one screw per fixture.

We will also go through a recent IDS release called ScanBridge, which offers a ground-breaking, high-precision, economical solution to the problems associated with full-arch scanning in edentulous patients. Compatible with any commercially available IOS, and 3D printed!

We are pleased to announce the establishment of the TRI Clinical Advisory Board and the appointment of Dr. Tom Giblin and Prof. Axel Spahr as Co-Chairmen. They will be available to discuss their area of expertise and respond to any enquiries you may have.



JOIN US TO DISCOVER THE KEY TO TRUE DIGITAL IMPLANTOLOGY!
